**ARP® EXPANDS TAPERED
 RING COMPRESSOR LINEUP**

January, 2016
 FOR IMMEDIATE RELEASE

Engine builders now have 127 different sized Tapered Ring Compressors to choose from in ARP's extensive collection. The expanded selection ranges from 3.552" to 4.750" and 75mm to 100mm on the Metric side. These superior quality, precision CNC machined 6061-T6 aluminum billet tube compressors have a true radius for each different bore diameter and feature a relief to accommodate block O-rings and ensure proper seating.

Designed for the professional, bore sizes are prominently engraved in large ¾" tall letters, and Type 3 anodizing is employed to assure long service life.

They are far more efficient than clamp-style tools and guard against damage to the piston rings during the assembly process.

For additional information on these and other engine building aids visit www.arp-bolts.com. The big new 2016 ARP catalog is available for immediate downloading, or a free printed printed version can be requested. Toll-free technical assistance can be obtained by calling 800-826-3045.
