

New Motor Mounts From Art Morrison

The task of installing a multitude of engines—including the latest Chevy LT1/LT4 and Ford Coyote V8s—into early model street rods, classic trucks and muscle cars has been simplified thanks to a series of new motor mount kits from Art Morrison Enterprises.

Based on the popular high performance polyurethane-padded mounts from Energy Suspension, they will provide superior engine control compared to factory type rubber mounts, as well as excellent noise suppression. The mounts attach to CNC-machined billet aluminum adapter plates that are furnished with each kit. They are available for Chevrolet LS-series and LT1/LT4 engines, plus Ford Coyote, 429-460 blg block and small block Windsor and Cleveland powerplants. A full compliment of premium quality plated Grade 8 fasteners are included in the kits.

Also available from AME are companion tubular steel crossmembers and formed steel tubes that can be adapted to most any chassis and provide a solid anchor for the engine mounts.

For additional details visit www.ArtMorrison.com, where the firm's new 2017 catalog can be downloaded, or call Morrison's tech staff toll-free at 800-929-7188. An award-winning manufacturer of chassis and suspension components founded in 1972, Art Morrison Enterprises is located in Fife, Washington.
