

NEW 2018 CATALOG FROM MANLEY PERFORMANCE

A multitude of new products and applications has been added to the 2018 catalog just published by noted internal engine components manufacturer Manley Performance. The publication has increased in size to 180 pages, even though products for Sport Compacts now reside in a stand-alone catalog.

Manley Performance, of course, is known for having the industry's largest selection of stainless steel and titanium valves. The company also is known for its ultra-durable NexTek® valve springs and companion steel and titanium retainers—which include some innovative designs. Nobody does valve trains better.

The company is also noted for what goes in the block, with the catalog detailing a large selection of one-piece chrome moly pushrods, Platinum Series pistons forged from the preferred 2618 alloy aluminum, plus 4340 and 300M forged steel connecting rods. A wide array of forged steel crankshafts enable Manley to offer a collection of factory-matched rotating assemblies for small and big block, LS & LT Chevy engines, plus many Ford and Mopar applications.

You can easily download the entire catalog, or just sections, at www.manleyperformance.com, while a printed copy of the catalog plus a colorful Manley T-shirt is available for \$10. Please state size and remit to Manley Performance, 1960 Swarthmore Ave., Lakewood, NJ 08701. Tech help is available by calling 732-905-3366.
