

## **NEW 2018 CATALOG FROM ART MORRISON ENTERPRISES**

Art Morrison Enterprises has just released the 2018 edition of its annual Chassis & Suspension Components catalog. The 72-page, full color publication details the company's wide range of products.

First and foremost among them is Morrison's ever-expanding lineup of GT Sport chassis, which are bolt-in replacements for factory frames that incorporate modern suspension technology to achieve improved handling, a better ride and a contemporary stance. GT Sport chassis, which feature all required body and bumper mounts, plus core support, are available for a multitude of 1940s through '70s cars and trucks. AME also offers a line of MaxG and "builder chassis" that are CAD engineered for virtually any application, with body mounting handled by the builder.

Morrison also manufactures a variety of front and rear clips—the most innovative being Multi-Link IRS setups with a choice of three cradle sizes. Front clips are available with five suspension options, including air springs, with a half-dozen offerings for the rear (besides the IRS).

Virtually everything required to finish building a chassis, including spindles, brakes, shocks, springs, rear end housings, axles, brackets, tabs, roll bars and steering components—as well as many useful tools for the do-it-yourselfer—can be found in the catalog. For additional information visit [www.ArtMorrison.com](http://www.ArtMorrison.com) or call 800-929-7188. A printed copy of the new catalog is available upon request.
