

MORRISON GT SPORT CHASSIS NOW AVAILABLE FOR 1955-59 CHEVY/GMC

Art Morrison Enterprises has expanded its line of “bolt-on” GT Sport chassis to include the popular 1955-59 Chevy “Task Force” series of pickup trucks and its GMC counterparts. The advanced chassis design, augmented by 3D scanning and CAD technology, is a perfect replacement for the aged factory frame. While designed for use by do-it-yourself enthusiasts, many leading professional constructors have come to rely on AME GT Sport chassis for award-winning builds.

Engineered to provide corner-carving handling and a great ride, the beefy 2" x 6" main-rail chassis features an AME Sport IFS with heavy-duty control arms, an adjustable sway bar, coil-over shocks and power rack & pinion steering. The rear suspension features a Johnny Joint-equipped 4-bar, Panhard bar, coil-overs and adjustable sway bar.

A choice of two different ride heights is offered; a “standard” stance that requires no modifications, or a much lower stance that necessitates raising the bed floor three inches. Other key features include through-frame exhaust passages for optimum ground clearance, and fuel tank mounts behind the 9" housing that helps with overall balance of the vehicle. Body mounts and core support are also included.

Available with mounts for small block, big block or LS-series Chevy engines, plus virtually any popular standard or automatic transmission, this is the perfect foundation for a resto-mod classic truck of the highest order. Details are online at www.ArtMorrison.com, and further assistance is available by calling 800-929-7188.
