

## **Sportsman Refill Pump From Nitrous Supply**

Pro Mod racers and other competitors who are high volume users of nitrous oxide can benefit from the new Sportsman Nitrous Pump available from Nitrous Supply. The handy refill station is designed for quickly transferring nitrous oxide from large 48-64 lb. capacity “mother bottles” to smaller vehicle-mounted bottles.

Ideally suited to keeping N<sub>2</sub>O bottles topped off for peak efficiency, this economical pump is designed to operate at 100 psi air pressure, easily attainable through most shop and trailer-mounted compressors. Use of a filter to assure a flow of dry air is imperative.

Nitrous Supply’s “Sportsman” pump is priced significantly lower than the “Pro” pumps the firm sells for high volume commercial applications, and is a cost-effective investment for serious racers.
