

## **"Supershot" Budget Nitrous Kits From Nitrous Supply**

Mike Thermos, the driving force behind the popularization of nitrous oxide as a power-adder, has made good use of his 40-plus years experience and created budget-priced kits for both carbureted and fuel injected applications. Called the "SuperShot," this adjustable kit from Nitrous Supply can boost power in 100, 150, 200 and 250 HP levels.

The easy-to-install kits are configured with plates for 4150 or 4500 series carburetors, or with a nozzle for EFI installations. Also included in the package, which retails for \$395, are a 10-lb. aluminum bottle, mounting brackets, Hi-Flow valve with safety relief, stainless steel nitrous and fuel solenoids, 14' of steel braided line, filter fittings and longer studs for carbureted engines.

Nitrous Supply, founded in 2005, is a primary manufacturer of components for N<sub>2</sub>O systems and has recently expanded into offering complete kits. Sophisticated direct injection "fogger" kits are also available.

Located at 15552 Producer Lane in Huntington Beach, California, Nitrous Supply offers complete manifold plumbing services, as well as N<sub>2</sub>O refills. A detailed description of the firm's product line can be found at [www.NitrousSupply.com](http://www.NitrousSupply.com), and personalized technical assistance is available through calling 714-373-1986.
