

Hyper-Flow Valve From Nitrous Supply

In its quest to improve the performance, reliability and safety of nitrous systems, Nitrous Supply—the firm founded by N₂O pioneer Mike Thermos—has developed an improved bottle valve that can replace existing “Hi-Flow” designs on 5, 10, 12 and 15 lb. bottles.

The new Hyper-Flow valve from Nitrous Supply has several important enhancements, including a near-perpendicular valve/outlet flow path for improved sealing and an AN-8 threaded safety port that facilitates running a hose to route any pressure discharge outside the vehicle—a key safety consideration.

Nitrous Supply’s Hyper-Flow bottle valve also features a 1/8 NPT gauge port to enable users to keep tabs on nitrous pressure.
