

## **NEW THROUGH-FRAME FITTINGS FROM ART MORRISON ENTERPRISES**

Routing fuel, brake and hydraulic clutch lines in a street rod or resto-mod can be challenging—especially when the optimum solution involves running them through, instead of around, a frame rail. The innovators at Art Morrison Enterprises have come up with an elegant solution to the problem in the form of bulkhead-type fittings designed for use with standard 2" wide frame rails.

Available in three configurations, the combinations include AN-3 male/AN-3 female, AN-3 male/AN-3 male and AN-6 male/AN-6 male. Manufactured in-house from premium stainless steel material, they're impervious to rust and corrosion.

In addition to the through-frame bulkhead fittings, AME offers a number of handy accessories to aid in fluid control and storage. Check them out at [www.artmorrison.com](http://www.artmorrison.com), or call 800-929-7188 for personalized tech assistance.
