BILLET ALUMINUM PORSCHE PEDAL ASSEMBLY FROM PENTA MOTORSPORTS

***July, 2023
FOR IMMEDIATE RELEASE***

<https://electronic-pr.com/2023/06/porsche-pedal-assembly/>

Penta Motorsports has developed a billet aluminum pedal assembly that is a bolt-in replacement for the factory steel units in 1963 through 1989 Porsche 911s. Important benefits include pedal position adjustability to achieve optimum heel/toe actuation, the ability to accurately set the front/rear brake balance, and use of the highly regarded Tilton 78-series brake and clutch master cylinders mounted on the unit for ease of maintenance and security.

The truss-style pedal arms and base have been designed using FEA (finite element analysis) and precision CNC-machined from 6061-T6 aluminum, then anodized (gold arms and black pedal pads/base). Key attributes include the use of precision ball-bearing pivots instead of OEM brass bushings and “clockable” 32-spline shafts (plus multiple pedal pad positions) facilitating pedal placement to suit the driver.

While Penta’s pedal assembly is perfect for racing applications, it can serve to enhance driver comfort for city and highway driving. For additional details visit www.PentaMotorsports.com or call 747-888-9800.

Penta Motorsports is located at 14399 Princeton Ave. in Moorpark, CA and manufactures a variety of other products for air-cooled 911 Porsches.
