

SYSTEM 1 INTRODUCES "CLEANABLE" OIL FILTER

System 1, the oil filtration experts, has introduced a new canister-style oil filter with an easily removable stainless steel mesh element. This facilitates prompt inspection of the lubricant for engine-damaging debris, and eliminates messy filter bisections.

Engineered to fit virtually any engine block or remote mount, the housing is CNC machined from billet aluminum and black anodized. A 45-micron element is standard, but 30 and 75-micron elements are an available option.

An important money-saving benefit of the System 1 oil filter is the ability to simply clean and re-install the mesh element, eliminating the need to constantly replace spin-on type filters. It's an investment that will pay dividends in saving time and money for years to come.

For more information visit www.System1Filters.com or call 559-687-1955 for personalized technical assistance. All products are proudly made in the USA. System 1 Filtration is located at 6080 Leonard Noell Dr. in Tulare, California.
