## ***New Wiseco Pistons For Ford 7.3L Godzilla Engine***

The emerging popularity of Ford's new 7.3L "truck" engine in competition applications has prompted highly respected piston manufacturer Wiseco to develop a high performance 2618 forged aluminum replacement for the OEM hypereutectic piston. They have been used successfully by leading Ford engine builders.

Offered with either 10.0:1 and 11.0:1 compression ratios, the piston features a 4.220" bore design to compliment factory specs. The forging features a strutted design to provide maximum strength at minimum weight, and is bolstered by the use of an H-13 tool steel wrist pin. Wiseco's race-proven ArmorGlide® skirt coating reduces friction and provides improved durability.

A perfect compliment to Wiseco's new Godzilla piston is the new H-Beam connecting rod from sister Race Winning Brands company K1 Technologies, a high performance replacement for the OEM cracked powdered metal rod.

Additional information can be obtained by calling 440-951-6600 or visiting [www.Wiseco.com](http://www.Wiseco.com). An industry leader for over 80 years, Wiseco is headquartered at 7201 Industrial Park Blvd. in Mentor, Ohio. Products are proudly manufactured in-house.
