Classic Dash Panels For Big 12.3" Holley Digital Display

December 2022
FOR IMMEDIATE RELEASE

<https://electronic-pr.com/2022/12/classic-dash-panels-for-big-12-3-holley-digital-display/>

Classic Dash, the company known for facilitating the use of aftermarket digital and analog gauges in a wide variety of vehicles through its bolt-in panels, has expanded its offerings to include the new Holley EFI 12.3 Pro Dash digital display.

With its large 1280 x 480 pixel high resolution display, the 12.3" diagonally measured screen serves up easy-to-read information from a variety of functions. It can also be employed to tune Holley Dominator, HP, Terminator X and Sniper EFI systems. The unit can be programmed to monitor up to 238 functions, including a GPS speedometer.

The panels are manufactured in-house at Classic Dash's Carson City, Nevada facility using a rugged, UV-resistant ABS composite material, and can be installed using only commonly-available tools. Initial applications include 1973-83 and 1984-87 Chevy/GMC trucks, as well as 1978-81 and 1982-88 Chevrolet G-Body vehicles, plus 1973-79 Ford F-100 trucks. A "universal" panel is also available for use by fabricators and many additional applications are under development.

Panels are available bare, or completely bundled with a Holley 12.3" Pro Dash. Classic Dash also manufactures panels to accommodate other-sized Holley EFI, Racepak, Auto Meter and AEM electronics, as well as 25 different styles of analog gauges. For details visit www.ClassicDash.com or call 1-866-882-3525.
