DeLuxe Super Hi-Flow Bottle Valve From Nitrous Supply

Nitrous Supply now offers an upgrade to its popular Super Hi-Flow bottle valve that looks as good as it performs. The DeLuxe model of the Super Hi-Flow valve features a polished surface and premium chrome plating. On the inside are the same important features that deliver im-proved performance.

The 135° nitrous flow-path is superior to standard designs that have a 90° bend. Other enhancements include a 1/8 NPT gauge port and an AN-8 “racer safety port” that facilitates routing a pressure discharge out-side of the vehicle. There is a 1/4 NPT port to facilitate use of a NANO-type pressurized assist. A 1/2” siphon tube is standard.

Racers seeking optimum performance and safety can step up to Ni-trous Supply’s exclusive Outlaw Power Valve, which is lever-actuated (in-stead of a screw handle) and can be attached to a pull cable to facilitate shutting off the nitrous from outside the vehicle. It also has a straight flow path and a big 5/8” siphon tube.

For additional information on the bottle valves, and other nitrous ox-ide system components, visit www.NitrousSupply.com or for personalized technical assistance call 714-373-1986. Located in Huntington Beach, California, Nitrous Supply also offers N2O bottle filling, system plumbing and other services.
