Expanded Wheel Stud Selection From ARP

Industry-leading fastener manufacturer ARP is best known for its vast lineup of engine-related bolts and studs. It's important to note that the company has also invested a considerable amount to engineering and manufacturing technology to an ever-expanding collection of high performance wheel studs for competition and street applications.

All are manufactured from 8740 chrome moly steel and precision heat-treated in-house to a tensile strength of 190,000 psi. The threads are rolled after heat-treat to provide significantly improved fatigue strength. All studs are cadmium plated for extra protection — with the unique bullet-nosed Speed Studs™ given a baked-on dry film lubricant.

Replacement press-in wheel studs are available for over three dozen OEM axles and hubs — including longer studs that facilitate use with aftermarket wheels. Screw-in studs with lengths ranging from 1.950" to 3.470" for aftermarket axles. They feature rounded noses for easy wheel and lug nut installations.

ARP also manufactures drive pins for circle track applications, as well as the NASCAR-spec Speed Studs. For details on the entire lineup visit www.ARP-bolts.com, or call 800-826-3045 for personalized technical assistance. A free printed copy of the latest ARP catalog is available upon request.
