## ARP Expands Tapered Ring Compressor Selection

Engine builders seeking efficient short block assembly now have 129 different sized Tapered Ring Compressors to choose from in ARP's extensive collection. The expanded selection ranges from 3.552" to 4.750" and 70mm to 100mm on the Metric side. These superior quality, precision CNC machined 6061-T6 aluminum billet tube compressors have a true radius for each different bore diameter and feature a relief to accommodate block O-rings and ensure proper seating.

Designed for the professional engine builder, bore sizes are prominently engraved in large ¾" tall letters, and Type 3 anodizing is employed to assure long service life.

They are far more efficient than clamp-style tools and guard against damage to the piston rings during the assembly process.

For additional information on these and other engine building aids visit ARP-Bolts.com. The big new 2025 ARP catalog is available for immediate downloading, or a free printed version can be requested. Toll-free technical assistance can be obtained by calling 800-826-3045.
